Job description

Role Summary:

- The NVM Reliability team is responsible for characterizing, modeling, and enabling next-generation Non-Volatile Memory technologies, enabling new product creation company-wide.

Job Responsibility:

- Manage execution of NVM reliability characterization experiments, working closely with experienced engineers and technicians.
- Identify and implement process improvements that increase laboratory efficiency, equipment utilization, and execution quality.
- Maintain lab equipment (read schematics, trouble-shoot, coordinate with vendors and trades).
- Develop software and systems for monitoring, automation, and data processing (database, web server, Linux/Windows)
- Assist in developing/debugging evaluation software (embedded C/C++).

- Debug hardware (Oscilloscope, logic analyzer, debugger, etc.). PCB schematics and components.
- Perform statistical analysis of reliability characterization data.
- Communicate study conclusions and recommendations to internal and external teams.
- Ensure compliance with applicable safety, quality, and engineering standards.

Job Qualification:

- Bachelor's or Master's degree in Electrical Engineering, Computer Science, Applied Physics, or equivalent, within the past 2 years.
- Familiarity with scripting languages, data processing, and analysis (e.g. Python, JMP, Exensio, etc.).
- Software development experience, such as familiarity with microcontroller software development (C/C++) is desired.
- Interest in statistics and solid-state device fundamentals, especially as applied to emerging non-volatile memory technologies like MRAM and RRAM.
- Must be curious, proactive, and detail-oriented.
- Able to work in a team environment, communicate effectively, and solve problems.
