Job description

About Samsung Austin Semiconductor

Samsung is a world leader in advanced semiconductor technology, founded on the belief that the pursuit of excellence creates a better world. At Samsung Austin Semiconductor, we are Innovating Today to Power the Devices of Tomorrow.

Come innovate with us!

Position Summary

The primary function of this engineer position is to perform TEM analysis on semiconductor devices to understand the profiles, critical dimensions, chemical composition & distribution, defect composition & occurrence step et al, and generate in-depth report to help requesters making decisions on tool status change, process adjustment, wafer disposal et al, which is critical for the Fab to meet yield, TAT and cost reduction goals. Furthermore, this position develops new analysis techniques or improves current analysis techniques in terms of accuracy, throughput and TAT through innovation to meet the analysis needs of our customers on cutting edge technologies.

Role and Responsibilities

Here's What You'll Be Responsible For:

- Operate TEM tools of various models to perform timely and high quality analysis and generate in-depth report.
- Collaborate closely with customers to understand their demand, interpret or present TEM analysis results, identify defect root cause, establish fail
- Collaborate with Ops team on TEM sample quality improvement and development of sample prep BKM for advanced techniques.
- Recognize opportunities and lead projects regarding to analytical work improvement in terms of quality, TAT and cost.
- Perform level appropriate tool maintenance.
- Accept and provide peer trainings for technique transfers.
- Work hours: C (day) shift, 12 hours/day, Thursday through Saturday with alternating Wednesdays.

Skills and Qualifications

Here's what you'll need:

- B. S. to PhD in Materials Science, Electrical /Electronic Engineering, Physics, Chemistry, Chemical Engineering or closely related discipline.
- Must have ≥ 3 years hands-on experience on TEM and associated analysis techniques.
- Must have basic knowledge of semiconductor processes and device physics.
- Must have experience on materials physics and chemistry analysis.

The current base salary range for this role is between \$76,000 - \$145,000. Individual base pay rates will depend on factors including duties, work location, education, skills, qualifications and experience. Total compensation for this position will include a competitive benefits package and may include participation in company incentive compensation programs, which are based on factors to include organizational and individual performance.

Total Rewards

At Samsung Austin Semiconductor, base pay is just one part of our total compensation package. The base compensation for this role will depend on education, experience, skills, and location.

We offer a comprehensive benefits package, including:

- Medical, dental, and vision insurance
- Life insurance and 401(k) matching with immediate vesting
- Onsite café(s) and workout facilities
- Paid maternity and paternity leave
- Paid time off (PTO) + 2 personal holidays and 10 regular holidays
- Wellness incentives and MORE

Eligible full-time employees (salaried or hourly) may also receive MBO bonuses based on company, division, and individual performance.

All positions at Samsung Austin Semiconductor are full-time on-site.

U.S. Export Control

This role may require access to information subject to U.S. export control laws. Applicants must be authorized to access such information or eligible for government authorization.

Trade Secrets

By submitting an application, you agree not to disclose to Samsung or induce or encourage Samsung to use any confidential or proprietary information (including trade secrets) belonging to a current or former employer or other entity.
