Description

Change the world. Love your job.

Texas Instruments is looking Thinfilms, Implant, and Epi Automation Engineer with a passion for process and automation. This role offers the opportunity to revolutionize how our manufacturing team operates by developing and automating complex workflows for Qualifications, Material Dispositions, Process Releases, and other critical semiconductor manufacturing processes. You will leverage modern technologies and AI-driven development to drive improved efficiencies, yields, and quality in a high-volume 300mm wafer Fab. We are searching for a self-directed, highly motivated engineer to join our team.

About the job:

Texas Instruments is seeking a Thinfilms, Implant, and Epi Automation Engineer who is experienced in developing software and automation solutions to enhance manufacturing quality and productivity. This role is critical to our digital transformation, bridging the gap between process engineering and advanced software development. The ideal candidate is someone who can not only understand complex semiconductor manufacturing processes but also possesses the technical expertise to build, deploy, and sustain automation tools and data pipelines. You will

be building solutions that directly impact manufacturing quality and operations while helping transform how our team approaches automation through modern development techniques and AI-assisted coding.

Primary Responsibilities:

- Develop and automate manufacturing workflows Qualifications, Dispositions, Process Releases, and other Critical Process Steps.
- Rapidly develop and deploy applications and automation solutions using AI code generation platforms (Claude, Copilot, Cursor, etc.) to accelerate development & implementation
- Automate lot and equipment dispositions to support continuous production flow and minimize cycle time
- Identify systematic problems in process or equipment and develop automated solutions to drive resolution
- Work with project managers and internal customers to define requirements and develop solutions that meet manufacturing needs
- Provide data solutions and pipelines that enhance manufacturing applications and decision-making
- Document software systems, usage requirements, and troubleshooting guides for manufacturing teams
- Deliver high quality automated solutions in a timely manner
- Make applications and automation tools compatible with other TI sites and data systems
- Automate repetitive tasks to drive increased efficiency
- Mentor team members across the organizations on proper software development and management techniques

Qualifications

Minimum requirements:

- Bachelors of Science degree in Computer Science, Engineering, Software Engineering, Mathematics, or another related field
- 5+ years of experience with full-stack development without co-development tools & experience in a manufacturing environment
- Demonstrated experience with AI agentic frameworks (such as Claude, Copilot, Cursor or similar AI co-development tools) for accelerating programming tasks

Preferred qualifications:

- Experience in semiconductor industry is preferred, added plus if directly related to Thinfilms, Implant, and/or Epitaxy
- Experience with relational database management systems (Oracle, MSSQL, PostgreSQL) and SQL
- Strong focus on gathering customer requirements and meeting customer needs
- Demonstrated ability to work in teams and collaborate effectively across several different functions

- Demonstrated ability to take the initiative and drive for results
- Strong critical thinking and problem-solving skills
- Good listener and excellent verbal and written communication skills
- Strong time management skills that enable on-time project delivery
- Passion for the job and willingness to dig in and learn from those around you

About the organization

TI does not make recruiting or hiring decisions based on citizenship, immigration status or national origin. However, if TI determines that information access or export control restrictions based upon applicable laws and regulations would prohibit you from working in this position without first obtaining an export license, TI expressly reserves the right not to seek such a license for you and either offer you a different position that does not require an export license or decline to move forward with your employment.

About the company

Why TI?

- Engineer your future. We empower our employees to truly own their career and development. Come collaborate with some of the smartest people in the world to shape the future of electronics.
- We're different by design. Diverse backgrounds and perspectives are what push innovation forward and what make TI stronger. We value each and every voice, and look forward to hearing yours. [Meet the people of TI](#)
- Benefits that benefit you. We offer competitive pay and benefits designed to help you and your family live your best life. Your well-being is important to us. Please find our country-specific benefits [here](#)

About Texas Instruments

Texas Instruments Incorporated (Nasdaq: TXN) is a global semiconductor company that designs, manufactures and sells analog and embedded processing chips for markets such as industrial, automotive, data center, personal electronics and communications equipment. At our core, we have a passion to create a better world by making electronics more affordable through semiconductors. This passion is alive today as each generation of innovation builds upon the last to make our technology more reliable, more affordable and lower power, making it possible for semiconductors to go into electronics everywhere. Learn more at [TI.com](https://www.ti.com).

Texas Instruments is an equal opportunity employer and supports a diverse, inclusive work environment. All qualified applicants will receive consideration for employment without regard to race, color, religion, creed, disability, genetic information, national origin, gender, gender identity and expression, age, sexual orientation, marital status, veteran status, or any other characteristic protected by federal, state, or local laws.
