Description

Change the world. Love your job.

The Smart Manufacturing and Automation team at Texas Instruments develops software solutions to address challenges faced by manufacturing and engineering teams. As a global organization, we strive to create solutions that are compatible with all TI sites. We're looking for candidates to join our team in **Richardson, TX and Lehi, UT** to join our team as we leverage modern technologies to deliver software and data solutions that enhance quality and productivity in semiconductor manufacturing.

About the job:

Texas Instruments is seeking a full-stack software development engineer who is experienced with AI code generation platforms and tools. This role is critical to accelerating our digital transformation through rapid development of quality and test solutions using cutting-edge development techniques. The position offers the opportunity to revolutionize how our Smart Manufacturing and Automation team builds software while establishing best practices and scaling development capabilities across the organization.

The ideal candidate is someone who is not just a software engineer, but is also experienced with leveraging platforms like Claude Code, GitHub Copilot, Cursor and emerging agentic frameworks

to dramatically accelerate development while maintaining high quality standards. You'll be building solutions that directly impact manufacturing quality and test operations while helping transform how our entire team approaches software development.

Primary Responsibilities:

- Build and sustain full-stack web applications that support manufacturing and engineering teams
- Rapidly develop and deploy applications, scripts, and automation solutions using AI code generation platforms (Claude, Copilot, Cursor, etc.)
- Work with project managers and internal customers to define requirements and develop solutions that meet manufacturing needs
- Provide data solutions/pipelines that enhance software applications
- Host software and data solutions in containerized production environment
- Create automation for releasing code into production (CI/CD)
- Review and provide feedback on code releases
- Document software systems, usage requirements, and troubleshooting guides for other team members
- Deliver high quality software in a timely manner
- Make applications compatible with other TI sites and data systems
- Automate repetitive tasks to drive increased efficiency
- Support and enhance legacy software solutions
- Mentor team members across the organizations on proper software development and management techniques

Qualifications

Minimum Requirements:

- Master's of Science degree in Computer Science, Engineering, Software Engineering, Mathematics, or another related field
- 5+ years of experience with full-stack development without co-development tools
- Demonstrated experience with AI agentic frameworks (such as Claude, Copilot, Cursor or similar AI co-development tools) for accelerating programming tasks

Preferred Qualifications:

- Experience with React/JavaScript/TypeScript or other frontend web development frameworks
- Experience with Python or other coding languages
- Experience with FastAPI or other backend web development python frameworks
- Experience with relational database management systems (Oracle, MSSQL, PostgreSQL) and SQL
- Experience with container orchestration, CI/CD, and other DevOps philosophies and practices. Including Kubernetes, Airflow, Jenkins, Docker, etc.
- Experience with developing software systems in a Linux OS environment
- Strong focus on gathering customer requirements and meeting customer needs

- Demonstrated ability to work in teams and collaborate effectively across several different functions
- Demonstrated ability to take the initiative and drive for results
- Strong critical thinking and problem-solving skills
- Good listener and excellent verbal and written communication skills
- Strong time management skills that enable on-time project delivery
- Passion for the job and willingness to dig in and learn from those around you

About the organization

TI does not make recruiting or hiring decisions based on citizenship, immigration status or national origin. However, if TI determines that information access or export control restrictions based upon applicable laws and regulations would prohibit you from working in this position without first obtaining an export license, TI expressly reserves the right not to seek such a license for you and either offer you a different position that does not require an export license or decline to move forward with your employment.

About the company

Why TI?

- Engineer your future. We empower our employees to truly own their career and development. Come collaborate with some of the smartest people in the world to shape the future of electronics.
- We're different by design. Diverse backgrounds and perspectives are what push innovation forward and what make TI stronger. We value each and every voice, and look forward to hearing yours. [Meet the people of TI](#)
- Benefits that benefit you. We offer competitive pay and benefits designed to help you and your family live your best life. Your well-being is important to us. Please find our country-specific benefits [here](#)

About Texas Instruments

Texas Instruments Incorporated (Nasdaq: TXN) is a global semiconductor company that designs, manufactures and sells analog and embedded processing chips for markets such as industrial, automotive, data center, personal electronics and communications equipment. At our core, we have a passion to create a better world by making electronics more affordable through semiconductors. This passion is alive today as each generation of innovation builds upon the last to make our technology more reliable, more affordable and lower power, making it possible for semiconductors to go into electronics everywhere. Learn more at [TI.com](https://www.ti.com).

Texas Instruments is an equal opportunity employer and supports a diverse, inclusive work environment. All qualified applicants will receive consideration for employment without regard to race, color, religion, creed, disability, genetic information, national origin, gender, gender identity and expression, age, sexual orientation, marital status, veteran status, or any other characteristic protected by federal, state, or local laws.
