Job description

Come join Analog Devices (ADI) – a place where Innovation meets Impact. For more than 55 years, Analog Devices has been inventing new breakthrough technologies that transform lives. At ADI you will work alongside the brightest minds to collaborate on solving complex problems that matter from autonomous vehicles, drones and factories to augmented reality and remote healthcare.

ADI fosters a culture that focuses on employees through beneficial programs, aligned goals, continuous learning opportunities, and practices that create a more sustainable future.

About Analog Devices

Analog Devices, Inc. (NASDAQ: [ADI](#)) is a global semiconductor leader that bridges the physical and digital worlds to enable breakthroughs at the Intelligent Edge. ADI combines analog, digital, AI, and software technologies into solutions that combat climate change, reliably connect humans and the world, and help drive advancements in automation and robotics, mobility, healthcare, energy and data centers. With revenue of more than \$11 billion in FY25, ADI ensures

today's innovators stay Ahead of What's Possible. Learn more at www.analog.com and on [LinkedIn](#) and [X](#).

About the Role

As an Associate Design Verification Engineer at Analog Devices, you will contribute to the verification of digital, analog, and mixed-signal integrated circuits prior to tape-out. Working under the guidance of experienced engineers, you will develop test benches, execute verification plans, analyze simulation results, and support coverage-driven verification activities.

This role offers the opportunity to build expertise in modern verification methodologies, industry-standard tools, and semiconductor product development while collaborating with cross-functional engineering teams to deliver high-quality solutions.

Key Responsibilities

- Develop and execute test benches for digital and mixed-signal design verification using SystemVerilog and established verification methodologies.
- Create and maintain verification environments that support functional and coverage-driven verification.
- Develop directed and constrained-random test cases to validate design functionality and performance.
- Perform code and functional coverage analysis to assess verification completeness and design quality.
- Debug simulation failures, analyze verification results, and identify potential design issues.
- Collaborate with design engineers to understand design requirements and verify implementation accuracy.
- Support verification planning, documentation, and design review activities.
- Utilize scripting and automation techniques to improve verification efficiency and productivity.
- Contribute to mixed-signal verification activities, including simulation and behavioral modeling where applicable.

Must-Have Skills

- SystemVerilog and Digital Verification: Knowledge of SystemVerilog and digital verification concepts, including test bench development and simulation-based verification.
- Verilog RTL Fundamentals: Understanding of RTL design principles and the ability to analyze and verify digital hardware designs.
- Verification Methodologies: Familiarity with coverage-driven verification concepts and structured verification practices.
- Scripting and Automation: Experience or coursework using scripting languages such as Python, Perl, or Tcl for automation and productivity improvements.
- Digital Interfaces and Protocols: Understanding of standard communication protocols such as I2C, SPI, UART, or similar interfaces.
- Problem Solving and Debugging: Ability to analyze simulation results, investigate failures, and resolve technical issues in a structured manner.
- Communication and Collaboration: Strong written and verbal communication skills with the ability to work effectively in a team environment.

Preferred Education and Experience

- Bachelor's degree in Electrical Engineering, Electronics Engineering, Computer Engineering, Computer Science, or a related field.
- 0-2 years of experience in digital design verification or a related engineering discipline.
- New graduates with relevant academic projects, internships, or coursework in digital design, verification, or semiconductor engineering are encouraged to apply.
- Exposure to Universal Verification Methodology (UVM), constrained-random verification, or SystemVerilog Assertions (SVA) is a plus.
- Familiarity with EDA simulation and debugging tools is preferred.
- Exposure to mixed-signal simulation, analog behavioral modeling, or object-oriented programming concepts is beneficial.

For positions requiring access to technical data, Analog Devices, Inc. may have to obtain export licensing approval from the U.S. Department of Commerce - Bureau of Industry and Security and/or the U.S. Department of State - Directorate of Defense Trade Controls. As such, applicants for this position – except US Citizens, US Permanent Residents, and protected individuals as defined by 8 U.S.C. 1324b(a)(3) – may have to go through an export licensing review process.

Analog Devices is an equal opportunity employer. We foster a culture where everyone has an opportunity to succeed regardless of their race, color, religion, age, ancestry, national origin, social or ethnic origin, sex, sexual orientation, gender, gender identity, gender expression, marital status, pregnancy, parental status, disability, medical condition, genetic information, military or veteran status, union membership, and political affiliation, or any other legally protected group.
