Job description

Who We Are

Applied Materials is the global leader in materials science and engineering solutions that are at the foundation of virtually every new semiconductor chip and advanced display in the world. The equipment that we create and service is essential to advancing AI and accelerating the commercialization of next-generation semiconductor chips. Join us and push the boundaries of materials science and engineering in a company at the foundation of the electronics industry. The work we do together advances the world's technology.

What We Offer

Salary:

\$65,500.00 - \$90,000.00

Location:

Austin, TX

You'll benefit from a supportive work culture that encourages you to learn, develop, and grow your career as you take on challenges and drive innovative solutions for our customers. We empower our team to push the boundaries of what is possible—while learning every day in a supportive leading global company. Visit our Careers website to learn more.

At Applied Materials, we care about the health and wellbeing of our employees. We're committed to providing programs and support that encourage personal and professional growth and care for you at work, at home, or wherever you may go. Learn more about our [benefits](#).

As a Manufacturing Engineer, you are responsible for developing and maintaining methods, operating sequences, and processes in the fabrication of parts, components, subassemblies, and final assemblies. You'll work closely with other engineering functions to coordinate the release of product improvements and new products, and you'll use engineering principles to estimate and reduce manufacturing costs, improve product quality, determine time standards, and make recommendations for tooling and process requirements. Your expertise in lean principles, automation, and continuous improvement will be instrumental in driving operational excellence and achieving higher levels of productivity and cost-effectiveness. You'll develop and use test procedures, evaluate test results, and assess work methods, procedures, and policies to identify root cause issues and solutions that ensure operational success.

Key Responsibilities

- Develop, implement, validate, and maintain manufacturing methods, process flows, assembly procedures, and operation sequences for the fabrication of parts, modules, subassemblies, and final systems.
- Support the transition of new products from Engineering to Manufacturing by partnering with Design Engineering, NPI, Quality, and Operations teams to ensure manufacturability, scalability, quality, and cost objectives are achieved.
- Drive engineering change implementation by reviewing, launching, approving, and executing Engineering Change Orders (ECOs), process changes, work instruction updates, and configuration management activities.
- Apply Design for Excellence (DFx) methodologies, including Design for Manufacturing (DFM), Design for Assembly (DFA), and Design for Cost (DFC), to improve productivity, quality, and overall manufacturing efficiency.
- Analyze manufacturing processes and workflows to identify opportunities for cycle time reduction, waste elimination, ergonomics improvements, and capacity enhancements using Lean Manufacturing and Continuous Improvement principles.
- Develop manufacturing documentation, including work instructions, process specifications, control plans, process maps, visual aids, and training materials.
- Collaborate with Test Engineering to develop and optimize test procedures, acceptance criteria, and test fixtures used during system integration and validation.
- Collect, analyze, and interpret manufacturing, quality, and test data to identify trends, drive root cause investigations, and implement corrective and preventive actions (CAPA).

- Lead and participate in structured problem-solving activities using methodologies such as 8D, 5-Why Analysis, Fishbone Diagrams, Pareto Analysis, and Failure Analysis techniques.
- Support Process Failure Mode and Effects Analysis (PFMEA), risk assessments, process validation activities, and readiness reviews for New Product Introduction programs.
- Evaluate supplier, component, and manufacturing process performance to improve reliability, yield, and overall product quality.
- Partner with cross-functional teams to resolve manufacturing issues related to assembly, integration, testing, and field-returned equipment.
- Estimate manufacturing costs, establish labor standards, evaluate tooling requirements, and recommend process improvements that increase productivity while reducing cost.
- Ensure manufacturing processes comply with Applied Materials quality standards, safety requirements, and applicable regulatory guidelines.
- Support factory performance objectives related to quality, delivery, cost, safety, and customer satisfaction.

Qualifications

Minimum Qualifications

- Bachelor's degree in Mechanical Engineering, Manufacturing Engineering, Industrial Engineering, Electrical Engineering, Chemical Engineering, or a related technical discipline.
- 0-2 years of engineering experience in manufacturing, production, process engineering, industrial engineering, or New Product Introduction environments.
- Basic understanding of manufacturing processes, engineering documentation, mechanical assemblies, and production operations.
- Experience analyzing data and using problem-solving methodologies to investigate manufacturing or quality-related issues.
- Knowledge of Microsoft Office applications, particularly Excel, PowerPoint, and Word.
- Ability to work effectively in a fast-paced, cross-functional team environment.
- Strong written and verbal communication skills.

Preferred Qualifications

- Internship, co-op, or industry experience in semiconductor equipment, advanced manufacturing, electronics, aerospace, automotive, medical device, or high-tech manufacturing environments.
- Familiarity with Lean Manufacturing, Six Sigma, Kaizen, and Continuous Improvement methodologies.
- Experience interpreting mechanical drawings, bills of materials (BOMs), specifications, and engineering change documentation.
- Exposure to ERP/MRP systems such as SAP, Oracle, or equivalent manufacturing systems.
- Knowledge of statistical analysis tools, process capability studies, and Manufacturing Quality Systems.

- Experience supporting New Product Introduction (NPI) or product transfer activities.
- Understanding of PFMEA, DFMEA, control plans, root cause analysis, and corrective action processes.
- Familiarity with semiconductor manufacturing equipment, vacuum systems, robotics, precision assemblies, fluid delivery systems, electromechanical systems, or automated production equipment.
- Green Belt certification or coursework in Lean/Six Sigma methodologies is a plus.

Competencies

- Strong analytical and problem-solving abilities.
- Results-oriented with a continuous improvement mindset.
- Ability to balance multiple priorities while maintaining attention to detail.
- Effective collaboration and stakeholder management skills.
- Demonstrates initiative, adaptability, and a commitment to operational excellence.

Career Level Description

Works under general supervision and applies engineering principles to address a range of routine to moderately complex manufacturing challenges. Builds technical knowledge of Applied Materials products, manufacturing processes, and customer requirements while developing proficiency in engineering analysis, process optimization, and problem-solving techniques. Receives guidance from senior engineers and managers while contributing to team objectives and continuous improvement initiatives.

Travel: Up to 10%, as required to support suppliers, manufacturing sites, or business needs.

Applications will be reviewed on a rolling basis. Please apply by November 30, 2026. Note: This position may close early based on application volume or candidate selection.

Additional Information

Time Type:

Full time

Employee Type:

New College Grad

Travel:

Yes, 10% of the Time

Relocation Eligible:

Yes

The salary offered to a selected candidate will be based on multiple factors including location, hire grade, job-related knowledge, skills, experience, and with consideration of internal equity of our current team members. In addition to a comprehensive benefits package, candidates may be eligible for other forms of compensation such as participation in a bonus and a stock award program, as applicable.

For all sales roles, the posted salary range is the Target Total Cash (TTC) range for the role, which is the sum of base salary and target bonus amount at 100% goal achievement.

Applied Materials is an Equal Opportunity Employer. Qualified applicants will receive consideration for employment without regard to race, color, national origin, citizenship, ancestry, religion, creed, sex, sexual orientation, gender identity, age, disability, veteran or military status, or any other basis prohibited by law.

In addition, Applied endeavors to make our [careers site](#) accessible to all users. If you would like to contact us regarding accessibility of our website or need assistance completing the application process, please contact us via e-mail at Accommodations_Program@amat.com, or by calling our HR Direct Help Line at 877-612-7547, option 1, and following the prompts to speak to an HR Advisor. This contact is for accommodation requests only and cannot be used to inquire about the status of applications.
