Job description

Job Details:

Job Description:

Do Something Wonderful.

Intel is shaping the future of technology to help create a better future for the entire world. Our work in pushing forward fields like AI, analytics, and cloud-to-edge technology is at the heart of countless innovations. With a career at Intel, you'll have the opportunity to use technology to power major breakthroughs and create enhancements that improve our everyday quality of life. Join us and help make the future more wonderful for everyone.

Foundry Back-End Automation team (BEA) is hiring a highly skilled Senior Automation Systems Integration Engineer to lead the requirement definition, design, development, and deployment of automation software supporting TD and high-volume semiconductor manufacturing operations. This role focuses on integrating factory systems-including equipment control, production activity control, MES, yield management, and SPC systems-to optimize throughput, improve product

quality, and enhance operational efficiency.

The ideal candidate has deep experience in semiconductor automation architectures, strong software engineering capabilities, and hands-on knowledge of yield analysis workflows and statistical process control (SPC) automation.

Key Responsibilities

- Architect, develop, and deploy automation solutions with partner organizations across wafer prep, die prep, and assembly test manufacturing. The position will require candidates to be able to interface with semiconductor manufacturing equipment, and automated manufacturing execution systems and partner organizations.
- Partner with manufacturing, equipment engineering, IT, process engineering, and quality teams to understand business needs and translate them into automation solutions.
- Maintain and improve software architecture, ensuring scalability, robustness, and maintainability.
- Lead root-cause analysis and system-level debugging for complex integration issues.
- Lead technical discussions, provide mentorship to junior engineers, and drive best practice adoption across the automation team.
- Explore emerging business disruptions and trends in the industry with the objective of identifying opportunities to influence and intercept internal product roadmaps with specific product and/or feature responses.

Qualifications:

Minimum qualifications are required to be initially considered for this position. Preferred qualifications are in addition to the minimum requirements and are considered a plus factor in identifying top candidates.

Minimum Qualifications

- Bachelor's or Master's Degree in Computer Science, Computer Engineering, or related STEM field.
- 5+ years of experience in semiconductor manufacturing automation, systems integration, or related areas.
- 3+ years' experience with yield management systems (YMS), statistical process control (SPC), and automated yield/SPC workflows.

Preferred Qualifications

- Advanced degree in Computer Science, Computer Engineering, or related STEM field.
- Hands-on experience with SEMI communication standards (SECS/GEM, EDA/Interface A, GEM300).
- Strong debugging and data analysis skills, especially in complex production environments.
- Experience in 300mm manufacturing environments. MES300 and/or Workstream experience is a plus.

- Experience collaborating with yield engineering teams to enhance automated analytics for scrap reduction, drift detection, and process health monitoring.
- Understanding of factory KPIs (OEE, cycle time, throughput, yield)

Requirements listed would be obtained through a combination of industry relevant job experience, internship experiences and or schoolwork/classes/research.

Benefits at Intel

Our total rewards package goes above and beyond just a paycheck. Whether you're looking to build your career, improve your health, or protect your wealth, we offer generous benefits to help you achieve your goals. Go to Intel Benefits ' Intel Careers for details of benefits available to you. Intel reserves the right to modify, change or discontinue benefit plans at any time in its sole discretion.
