Description

Change the world. Love your job.

Do you want to work for an organization that values your opinion? Do you want to work for an organization where you can play a pivotal role in several different areas? Look no further. As a Texas Instruments Equipment Engineer, you will have the opportunity to work in a vibrant and dynamic team oriented environment.

Responsibilities include:

- Support manufacturing operations
- Evaluating, selecting, and ordering equipment that is most appropriate and cost effective for the manufacture of company products
- Overseeing the installation, modification, upgrade and maintenance of manufacturing equipment
- Keeping current on equipment manufacturers' technical notices, upgrades and safety issues
- Studying equipment performance and reliability - Participate in data analysis and problem resolution

- Perform lot and equipment dispositions to support the continuous flow of production and to minimize cycle time in a high volume manufacturing 300mm wafer Fab running Analog Technologies
- Establishing programs and solutions for increasing uptime and for equipment problems that affect the manufacturing process
- Providing technical support to the manufacturing equipment repair and process engineering organizations
- Defining and writing preventative maintenance schedules

Qualifications

Minimum Requirements:

- Bachelor's degree Electrical Engineering, Electrical Computer Engineering, Chemical Engineering, Mechanical Engineering, Materials Science Engineering, Physics or related engineering degree
- 5 years of relevant experience working in a semiconductor manufacturing environment as an Equipment Engineer or Fab engineer

Preferred Qualifications:

- Strong foundation in engineering change control - specific Equipment experience with AMAT CMP tool
- Equipment experience on other equipment (e.g., AMAT, Veeco, TEL, Novellus, and/or ASM)
- Experience on tool monitoring and interdiction software, and equipment maintenance and documentation
- Working knowledge of semiconductor manufacturing, and SPC techniques. Experienced with semiconductor cleanroom protocol and behaviors.
- Strong verbal and written communication skills
- Demonstrated strong analytical, critical thinking and problem solving skills
- Ability to work in teams and collaborate effectively with people in different functions
- Ability to take the initiative and drive for results
- Strong time management skills that enable on-time project delivery
- Ability to work effectively in an interrupt-driven, fast-paced and rapidly changing environment
- Demonstrated ability to build strong, influential relationship

About the organization

TI does not make recruiting or hiring decisions based on citizenship, immigration status or national origin. However, if TI determines that information access or export control restrictions based upon applicable laws and regulations would prohibit you from working in this position without first obtaining an export license, TI expressly reserves the right not to seek such a license for you and either offer you a different position that does not require an export license or decline to move forward with your employment.

About the company

Why TI?
