

DevOps Engineer - Semiconductor EDA Tools & Automation

Texas Instruments · Dallas, TX, United States

Job ID (this archive)	SC-070
Employer	Texas Instruments
Location(s)	Dallas, TX, United States
Posted / listing date	2026-06-23
Career stage (archive tag)	Experienced
Location group	DFW area
Career lane	Data, AI & software for chips
Pay listed	Not listed
Employer requisition	25011298
Source page	https://careers.ti.com/en/sites/CX/job/25011298
Accessed	2026-09-26

Saved on 2026-09-26 from the employer's public career site. The full posting text below is the employer's own wording, reformatted for printing (site navigation, buttons and cookie banners removed). Live listings change and close; check the source page before applying.

Description

Change the world. Love your job.

Mission

Empower TI to excel in semiconductor design and manufacturing by architecting, automating, and optimizing secure, high-performance environments for Electronic Design Automation (EDA) workloads. You will enable R&D and engineering teams to innovate faster by delivering scalable DevOps solutions that streamline the deployment and operation of EDA tools—including Cadence PSPICE, Artisan (TI internal EDA flow), PDKs (process development kits) and others—across cloud and hybrid infrastructure.

As a DevOps Engineer, you'll be instrumental in building and automating workflows for compute-intensive EDA applications in a secure, compliant, and highly available environment. Your work will directly impact TI's ability to deliver advanced semiconductor products to customers by ensuring seamless integration, operation, and optimization of industry-leading EDA toolchains.

You will:

- Design, automate, and manage DevOps pipelines for deploying and operating semiconductor EDA tools (Cadence PSPICE, Artisan, etc.) on-prem and in the cloud.
- Work closely with EDA tool vendors, TI EDA teams, and PDK teams while responding to customer inquiries.
- Build and maintain scalable infrastructure for simulation, verification, and design workloads, leveraging LSF or Slurm job schedulers.
- Develop and manage infrastructure-as-code solutions to automate provisioning, configuration, and scaling of EDA environments.
- Collaborate with engineering, IT and security teams to ensure robust cybersecurity controls and compliance for sensitive design data.
- Optimize compute, storage, and network resources to deliver fast, reliable access to EDA tools for global R&D teams.
- Troubleshoot, monitor, and enhance performance of EDA workloads and DevOps pipelines, driving continuous improvement.

Core Responsibilities:

- Deploy, configure, and automate EDA tools (Cadence PSPICE, Artisan, etc.) in hybrid and cloud environments.
- Design and manage high-performance, secure infrastructure for EDA workloads using LSF or Slurm job schedulers.
- Implement and maintain CI/CD pipelines for EDA application updates, test automation, and environment provisioning.
- Apply best practices for security, compliance, and operational reliability in semiconductor design environments.
- Provide technical guidance to engineers and researchers on DevOps, automation, and EDA workload optimization.

Qualifications

Minimum Requirements:

- Active and transferable U.S. government-issued Secret security clearance is highly preferred; must be able to obtain and maintain a Secret security clearance
- U.S. citizenship, as only U.S. citizens are eligible for a security clearance
- Bachelor's degree in Computer Science, Engineering, or related field
- 3+ years hands-on experience automating and deploying semiconductor EDA tools (e.g., Cadence Allegro, PSPICE, or Artisan; Altium Designer; AutoCAD; SIMetrix) in enterprise environments

Preferred Qualifications:

- Strong background in DevOps practices, infrastructure-as-code (Terraform, CloudFormation, or similar), and automation scripting (Python, Bash, etc.)
- Experience with LSF or Slurm job schedulers for high-performance compute workloads

- Experience with cloud platforms (AWS, Azure, or GCP) and hybrid infrastructure
- Experience supporting semiconductor design, simulation, or verification workloads at scale
- Experience with EDA license server deployment and management
- Knowledge of network and storage architecture for high-throughput environments
- Cloud certifications (e.g., AWS, Azure)
- Familiarity with regulatory and data security standards in the semiconductor industry
- Solid Linux administration skills
- Strong analytical and troubleshooting skills
- Excellent communication and collaboration ability

About the organization

TI does not make recruiting or hiring decisions based on citizenship, immigration status or national origin. However, if TI determines that information access or export control restrictions based upon applicable laws and regulations would prohibit you from working in this position without first obtaining an export license, TI expressly reserves the right not to seek such a license for you and either offer you a different position that does not require an export license or decline to move forward with your employment.

About the company

Why TI?

- Engineer your future. We empower our employees to truly own their career and development. Come collaborate with some of the smartest people in the world to shape the future of electronics.
- We're different by design. Diverse backgrounds and perspectives are what push innovation forward and what make TI stronger. We value each and every voice, and look forward to hearing yours. [Meet the people of TI](#)
- Benefits that benefit you. We offer competitive pay and benefits designed to help you and your family live your best life. Your well-being is important to us. Please find our country-specific benefits [here](#)

About Texas Instruments

Texas Instruments Incorporated (Nasdaq: TXN) is a global semiconductor company that designs, manufactures and sells analog and embedded processing chips for markets such as industrial, automotive, data center, personal electronics and communications equipment. At our core, we have a passion to create a better world by making electronics more affordable through semiconductors. This passion is alive today as each generation of innovation builds upon the last to make our technology more reliable, more affordable and lower power, making it possible for semiconductors to go into electronics everywhere. Learn more at [TI.com](https://www.ti.com).

Texas Instruments is an equal opportunity employer and supports a diverse, inclusive work environment. All qualified applicants will receive consideration for employment without regard to

race, color, religion, creed, disability, genetic information, national origin, gender, gender identity and expression, age, sexual orientation, marital status, veteran status, or any other characteristic protected by federal, state, or local laws.
