Description

Change the world. Love your job.

This position will be located in Dallas, TX, Richardson, TX, or Sherman, TX. Placement will be determined based on business need.

Do you want to work for an organization that values your opinion? Do you want to work for an organization where you can play a pivotal role in several different areas? As a Texas Instruments Manufacturing Engineer, you will have the opportunity to work in a vibrant and dynamic team-oriented environment.

- TI's Manufacturing Engineers are technical leaders who get to work in the world's most advanced manufacturing facilities. We bring the company's breakthrough innovations to life by manufacturing technologies that are literally changing the world.
- TI Process and Equipment Engineers are responsible for all aspects of a wafer fabrication process including tool selection and process definition. They assist with the installation, modification, upgrade and maintenance of the manufacturing equipment. This includes process setup and technician and operator training. This position will use data to make intelligent improvements to overall fabrication process and will be responsible for

understanding all aspects of the process performed. This includes the interaction of the process to other fab processing, enabling accurate product dispositions of non-conforming product. Interaction normally requires the ability to gain cooperation of others and conducting presentations of technical information concerning specific projects/schedules.

- As a Manufacturing Product Engineer, you will interface with design, process, test, reliability and manufacturing engineering to solve product issues and production problems, as well as developing process improvements to reduce production costs and increase yields. Manufacturing Product Engineers also manage new product introduction and production support engineering for a specific product or group of products after they have been transferred from design to in-house or outsourced production.

In this semiconductor fab engineer role with TI's worldwide manufacturing organization, you will be responsible for engineering process optimization efforts to achieve fab cycle time goals. You will interface with various modules, in addition to yield, product and integration teams, to resolve issues that limit yield performance.

Texas Instruments will not sponsor job applicants for visas or work authorization for this position.

Qualifications

Minimum requirements:

- Pursuing a Bachelors degree in Electrical Engineering, Electrical& Computer Engineering, Chemical Engineering, Mechanical Engineering, Materials Science, Physics, Microelectronics or MET
- Cumulative 3.0/4.0 GPA or higher

Preferred qualifications:

- Ability to establish strong relationships with key stakeholders critical to success, both internally and externally
- Strong verbal and written communication skills
- Ability to quickly ramp on new systems and processes
- Demonstrated strong interpersonal, analytical and problem-solving skills
- Ability to work in teams and collaborate effectively with people in different functions
- Ability to take the initiative and drive for results
- Strong time management skills that enable on-time project delivery

About the organization

TI does not make recruiting or hiring decisions based on citizenship, immigration status or national origin. However, if TI determines that information access or export control restrictions based upon applicable laws and regulations would prohibit you from working in this position without first obtaining an export license, TI expressly reserves the right not to seek such a license for you and either offer you a different position that does not require an export license or decline to move forward with your employment.

About the company

Why TI?

- Engineer your future. We empower our employees to truly own their career and development. Come collaborate with some of the smartest people in the world to shape the future of electronics.
- We're different by design. Diverse backgrounds and perspectives are what push innovation forward and what make TI stronger. We value each and every voice, and look forward to hearing yours. [Meet the people of TI](#)
- Benefits that benefit you. We offer competitive pay and benefits designed to help you and your family live your best life. Your well-being is important to us. Please find our country-specific benefits [here](#)

About Texas Instruments

Texas Instruments Incorporated (Nasdaq: TXN) is a global semiconductor company that designs, manufactures and sells analog and embedded processing chips for markets such as industrial, automotive, data center, personal electronics and communications equipment. At our core, we have a passion to create a better world by making electronics more affordable through semiconductors. This passion is alive today as each generation of innovation builds upon the last to make our technology more reliable, more affordable and lower power, making it possible for semiconductors to go into electronics everywhere. Learn more at [TI.com](https://www.ti.com).

Texas Instruments is an equal opportunity employer and supports a diverse, inclusive work environment. All qualified applicants will receive consideration for employment without regard to race, color, religion, creed, disability, genetic information, national origin, gender, gender identity and expression, age, sexual orientation, marital status, veteran status, or any other characteristic protected by federal, state, or local laws.
