Job description

Job Details:

Job Description:

What if your next project helped power the future of technology?

At Intel, you'll do more than learn, you'll contribute. You'll work side-by-side with industry leaders, gain hands-on experience on meaningful projects, and help solve real-world challenges that affect billions of people worldwide. From advanced semiconductor manufacturing to AI-powered innovations, you'll play a role in technologies that redefine how the world works, learns, and connects.

What makes Intel unique is the opportunity to see the entire technology lifecycle in action. Unlike many companies where hardware, software, and manufacturing operate separately, Intel brings

them together, giving you exposure to everything from research and design to advanced semiconductor manufacturing and global deployment.

Whether you're tackling engineering challenges, improving operations, analyzing data, advancing next-generation technologies, or supporting global customers, you'll build valuable skills while contributing to innovations that enable a more sustainable and connected future.

Bring your curiosity, make an impact, and see where your ideas can take you at Intel.

What You'll Do

Build technologies that power the future of computing. As a Platform Hardware and Systems Engineering Intern, you'll work on meaningful projects while building technical expertise that accelerates your professional growth.

- Hardware and systems architecture, design, and integration.
- Platform validation, debug, and performance optimization.
- Power, thermal, and signal integrity engineering.
- Programming, automation, and AI-enabled solutions.
- Cross-functional work that advances platform capabilities.

Develop technical depth, tackle complex challenges, and contribute from day one while learning alongside experienced Intel engineers and technical leaders.

Where Your Career Could Take You

Potential opportunity areas include:

- Hardware Design Engineer
- Systems Engineering & Architecture roles
- Platform Validation Engineer
- Power & Signal Integrity Engineer
- GPU Platform Hardware Design Engineer
- Silicon & Packaging Engineer
- Emerging Technologies & Research roles

Build technical expertise, explore new possibilities, and help shape what is next in computing and semiconductor technology.

Qualifications:

Must possess the minimum qualifications below to be initially considered for this position.

Experience may be gained through coursework, research, academic projects, internships, laboratory work, student organizations, leadership experiences, or other relevant experiences.

Minimum Qualifications

- Currently pursuing a Bachelor's degree in Computer Engineering, Computer Science, Data Science, Electrical Engineering, Chemical Engineering, Mechanical Engineering, Materials Science, Chemistry, Mathematics, Physics, or a related STEM field.
- 3+ months of experience gained through coursework, academic projects, research, internships, co-ops, student organizations, assistantships, or other relevant technical experiences.

Preferred Qualifications

- GPA of 3.0 or higher preferred.
- Experience or interest in design, architecture, programming, scripting, data analysis, automation, modeling, simulation, validation, or debugging.
- Hands-on coursework, research, projects, or internship experience related to the role family.
- Strong problem-solving, communication, collaboration, and ability to work in team-based environments.

Location & Immigration Information

As you consider the opportunity to join Intel, relocation assistance may be available based on eligibility, current location, and the specifics of the role.

Job location and modality of work will be communicated at time of offer. This position is not available in the state of Colorado.

This position is not eligible for employment-based visa/immigration sponsorship.

Intel sponsors individuals for employment-based visas for positions where we experience a shortage of U.S. workers. These skills shortage roles are typically STEM positions requiring a Master's or PhD degree, or a Bachelor's degree with at least three years of post-degree related job experience. This position does not qualify for Intel sponsorship because it is either a non-STEM position, or a STEM position that only requires a Bachelor's degree and less than three years' experience.

For information on Intel's immigration sponsorship guidelines, please see: <https://www.intel.com/content/www/us/en/jobs/hiring.html>

Additional Information

This application is for internship starts in Spring and Summer 2027, with consideration also given to candidates interested in year-long internship or co-op opportunities. You must be available to start work during this time frame.
