Job description

Job Details:

Job Description:

The Role and Impact:

As a Process Integration and Yield Engineering PhD Intern at Intel, you will be at the forefront of semiconductor manufacturing innovation. In this role, you will develop and optimize cutting-edge manufacturing processes while improving defect management strategies and driving process yield enhancements in high-volume production environments. Collaborating with cross-functional engineering teams, you will address complex technical challenges, troubleshoot process issues, and implement continuous improvement initiatives. This hands-on internship is an opportunity to grow your expertise, gain invaluable experience, and contribute to Intel's mission of delivering world-class semiconductor products.

Business group:

Intel Foundry plays a crucial role in advancing Intel's leadership in semiconductor manufacturing.

As part of this team, you will contribute to Intel's efforts to deliver innovative technologies that enrich lives worldwide. The group focuses on developing and optimizing manufacturing processes that drive Intel's industry-leading products while supporting continuous improvement in high-volume production environments.

Key Responsibilities:

- Contribute to the development and optimization of module processes and integration flows for semiconductor manufacturing.
- Analyze defect data, conduct experiments, and assist in risk assessments to support yield improvement initiatives.
- Collaborate with cross-functional engineering teams to troubleshoot process flow issues and optimize metrology strategies.
- Apply data analysis techniques to improve process performance and manufacturing efficiency.
- Participate in continuous improvement efforts focused on enhancing production quality and output.
- Engage in innovative projects to develop expertise and support Intel's business goals.

Qualifications:**Minimum Qualifications:**

- Actively pursuing a PhD in Physics, Electrical Engineering, Material Science, or Chemistry.
- Proficiency in microscopy techniques.
- Background in circuit design and semiconductor device physics.
- Basic scripting knowledge in Python or comparable programming languages.
- Understanding of scan methodologies and automatic test pattern generation.
- 3.0 GPA

Preferred Qualifications:

- 2nd or 3rd year PhD Graduate Students with course works including computer science-basic algorithms, and solid state/semiconductor physics, electronics/circuits designs, silicon process technologies, familiar with images analysis software and leading large visual computing models.

Explore this exciting opportunity to innovate, refine your technical skills, and contribute to Intel's industry leadership in semiconductor manufacturing. Apply today to join a team that is committed to advancing technology and creating a lasting impact globally.

Location & Immigration Information

As you consider the opportunity to join Intel, relocation assistance may be available based on eligibility, current location, and the specifics of the role.

This position is not eligible for employment-based visa/immigration sponsorship.

Intel sponsors individuals for employment-based visas for positions where we experience a shortage of U.S. workers. These skills shortage roles are typically STEM positions requiring a Master's or PhD degree, or a Bachelor's degree with at least three years of post-degree related job experience. This position does not qualify for Intel sponsorship because it is either a non-STEM position, or a STEM position that only requires a Bachelor's degree and less than three years' experience.

For information on Intel's immigration sponsorship guidelines, please see: <https://www.intel.com/content/www/us/en/jobs/hiring.html>

Additional Information

This application is for internship starts in late Spring/Summer 2027, with consideration also given to candidates interested in year-long internship or co-op opportunities. You must be available to start work during this time frame.
