Description

Change the world. Love your job.

This person will be responsible for supporting technology development operations through defect inspections, data analysis, inline vs eol defect correlations and presentations. Coming up with innovative ways of solving defectivity issues and putting in place correct methods for DD reductions to aid in technology development including blanket and patterned wafer inspections and putting in place SPC methodologies for tracking and control.

Responsibilities include:

- Develop and implement quality inspection recipes for both bright field & dark field KLA tools that result in a reliable inline signal of tool and process health. Results in increased yields and the highest product quality.
- Implement project or improvement plans for areas of responsibility including but not limited to: efficiency improvements, cost reduction or quality improvement programs and new product support.
- Perform lot and equipment dispositions to support the continuous flow of Silicon and to minimize cycle time in a high volume manufacturing 200mm / 300mm wafer Fab running mix

of products.

- Identify systemic/acute problems in either process or equipment related sources and leading/communicating findings to the engineering staff in a continuous manner.
- Participate in data analysis and problem resolution. This person will work across organization, in multiple fabs supporting all different TI technologies to ensure all program deliverables are met when it comes to defect inspections and DD reduction.
- Fundamental knowledge of semiconductor processing and integration is a must. Knowledge of KLA/AMAT/other inspection tools operations and recipe writing is a big plus.
- Drive process and device improvements through characterization, test, design of experiments, data analysis and simulation.
- Work with multiple process, integration, reliability, packaging and test engineers to achieve these goals.
- Work closely with the product groups to identify and optimize the resonator performance to meet critical final device parameters to enable game changing products in the market.

The person performing this role must be capable to plan effectively, drive schedules, meet critical deadlines on multiple tasks in parallel, lead technical discussions in their area of expertise, and work effectively across organizational boundaries. They must be able to clearly communicate project status and actions. Additionally, they must be able to interface with multiple organizations and work well on a diverse team to accomplish goals.

Qualifications

Minimum requirements:

- Masters in Electrical Engineering, Mechanical Engineering or related engineering degree
- 2+ years of experience working as a yield enhancement engineer within the semiconductor industry on devices and taking these devices from development to production on schedule

Preferred qualifications:

- Ability to establish strong relationships with key stakeholders critical to success, both internally and externally
- Strong verbal and written communication skills
- Ability to quickly ramp on new systems and processes
- Demonstrated strong interpersonal, analytical and problem-solving skills
- Ability to work in teams and collaborate effectively with people in different functions
- Ability to take the initiative and drive for results
- Strong time management skills that enable on-time project delivery

About the organization

TI does not make recruiting or hiring decisions based on citizenship, immigration status or national origin. However, if TI determines that information access or export control restrictions based upon applicable laws and regulations would prohibit you from working in this position without first obtaining an export license, TI expressly reserves the right not to seek such a

license for you and either offer you a different position that does not require an export license or decline to move forward with your employment.

About the company

Why TI?

- Engineer your future. We empower our employees to truly own their career and development. Come collaborate with some of the smartest people in the world to shape the future of electronics.
- We're different by design. Diverse backgrounds and perspectives are what push innovation forward and what make TI stronger. We value each and every voice, and look forward to hearing yours. [Meet the people of TI](#)
- Benefits that benefit you. We offer competitive pay and benefits designed to help you and your family live your best life. Your well-being is important to us. Please find our country-specific benefits [here](#)

About Texas Instruments

Texas Instruments Incorporated (Nasdaq: TXN) is a global semiconductor company that designs, manufactures and sells analog and embedded processing chips for markets such as industrial, automotive, data center, personal electronics and communications equipment. At our core, we have a passion to create a better world by making electronics more affordable through semiconductors. This passion is alive today as each generation of innovation builds upon the last to make our technology more reliable, more affordable and lower power, making it possible for semiconductors to go into electronics everywhere. Learn more at [TI.com](https://www.ti.com).

Texas Instruments is an equal opportunity employer and supports a diverse, inclusive work environment. All qualified applicants will receive consideration for employment without regard to race, color, religion, creed, disability, genetic information, national origin, gender, gender identity and expression, age, sexual orientation, marital status, veteran status, or any other characteristic protected by federal, state, or local laws.
