Job description

Our vision is to transform how the world uses information to enrich life for *all*.

Micron Technology is a world leader in innovating memory and storage solutions that accelerate the transformation of information into intelligence, inspiring the world to learn, communicate and advance faster than ever.

Join Micron's Design Engineering team and help drive the future of memory innovation. This team develops groundbreaking digital, analog, and mixed-signal circuitry that powers advanced memory solutions. You will collaborate with global teams across design, verification, process, and product engineering to deliver high-quality, scalable technologies that transform how the world uses information.

As a Memory Design Engineer specializing in HBM, you will contribute to the design, optimization, and validation of memory, logic, and analog circuits. You will partner closely with multi-functional engineering and manufacturing teams to support product development and ensure robust, efficient, and manufacturable solutions.

Key Responsibilities

- Design, layout, and optimize memory, logic, and analog circuits for HBM products

- Perform parasitic modeling, validation, reticle experiments, and support tape-out revisions
- Complete layout processes including floor planning, placement, and routing
- Conduct circuit verification using industry-standard modeling and simulation tools
- Collaborate with multi-functional teams (design, verification, process, product engineering) to ensure manufacturability and product success
- Use AI supported design and simulation tools to enhance circuit modeling accuracy, improve design efficiency, and accelerate development cycles

Minimum Qualifications

- Bachelor's or Master's degree in Electrical Engineering, Computer Engineering, or a related field (or equivalent experience)
- Experience using Generative AI for productivity
- Experience designing and analyzing digital, analog, or mixed-signal circuits
- Proficiency in parasitic modeling, verification, and simulation using industry-standard EDA tools
- Experience with layout processes (floor planning, placement, routing) and ability to interpret product requirements and specifications

Preferred Qualifications

- Experience collaborating across build, verification, product engineering, test, assembly, probe, or process integration teams
- Hands-on experience with reticle experiments or tape-out revision cycles
- Experience working with CAD, modeling, and standards teams to improve design methodologies
- Experience supporting semiconductor build activities, including circuit checking, device evaluation, and user documentation

As a world leader in the semiconductor industry, Micron is dedicated to your personal wellbeing and professional growth. Micron benefits are designed to help you stay well, provide peace of mind and help you prepare for the future. We offer a choice of medical, dental and vision plans in all locations enabling team members to select the plans that best meet their family healthcare needs and budget. Micron also provides benefit programs that help protect your income if you are unable to work due to illness or injury, and paid family leave. Additionally, Micron benefits include a robust paid time-off program and paid holidays. For additional information regarding the Benefit programs available, please see the Benefits Guide posted on micron.com/careers/benefits.

Micron is proud to be an equal opportunity workplace and is an affirmative action employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, age, national origin, citizenship status, disability, protected veteran status, gender identity or any other factor protected by applicable federal, state, or local laws.
