Job description

Our vision is to transform how the world uses information to enrich life for *all*.

Micron Technology is a world leader in innovating memory and storage solutions that accelerate the transformation of information into intelligence, inspiring the world to learn, communicate and advance faster than ever.

Do you love the interaction of cutting-edge hardware and innovative software solutions? In today's data economy, Micron's memory and storage products are essential to advancing state of the art computing technology. Continued scaling of memory technology presents challenges that require complex and creative testing solutions.

As a Product Test Engineer, you will be responsible for the development, debug and maintenance of test programs that help deliver Micron's world-class DRAM portfolio to market. A product test engineer can be focused on the health and quality of the memory cells [DRAM features 16 billion cells in less than 80mm² of area] or focused on high-speed interface, AI proficiency, AI supported workflow automation, and system level application testing.

Responsibilities

- Develop, debug and support test programs from new product introduction phase up through high volume manufacturing

- Write test programs and support scripts in C++, Python
- Contribute input and feedback to help define next generation 'design for test' capabilities
- Analyze device and test flow data to make informed test coverage decisions
- Balance test time objectives while maintaining optimal yield and quality
- Collaborate with partners in Design and Product Engineering, Fab, Manufacturing, Yield Enhancement, Global Quality, Systems Integration Group, and Equipment Engineering teams to deliver the right test solution

Minimum Qualifications

- Bachelor's degree or equivalent experience in Electrical Engineering, Computer Engineering, Computer Science or a related discipline
- Basic R/L/C circuit knowledge
- Digital systems and logic gate representation
- Understanding of CMOS transistor operation
- Basic statistics and data analytics

Preferred Qualifications

- Intermediate to advanced programming capability [C++ or Python]
- Basic Unix / Linux environment
- Excellent communication and interpersonal skills
- Familiarity with AI coding assistance, AI skill generation, and AI workflow automation

As a world leader in the semiconductor industry, Micron is dedicated to your personal wellbeing and professional growth. Micron benefits are designed to help you stay well, provide peace of mind and help you prepare for the future. We offer a choice of medical, dental and vision plans in all locations enabling team members to select the plans that best meet their family healthcare needs and budget. Micron also provides benefit programs that help protect your income if you are unable to work due to illness or injury, and paid family leave. Additionally, Micron benefits include a robust paid time-off program and paid holidays. For additional information regarding the Benefit programs available, please see the Benefits Guide posted on micron.com/careers/benefits.

Micron is proud to be an equal opportunity workplace and is an affirmative action employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, age, national origin, citizenship status, disability, protected veteran status, gender identity or any other factor protected by applicable federal, state, or local laws.
